AMENDMENTS TO THE CLAIMS:

This listing will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (Original) A method of printing a customer image order, the method comprising the steps of:

obtaining a digital record of a customer order containing a plurality of images;

selecting at least one image from said plurality of images for printing as an unenhanced image and as a digitally enhanced image;

digitally enhancing said at least one image; and printing said digitally enhanced image and said unenhanced image.

2. (Original) A method according to claim 1, wherein said printing step comprises:

printing said enhanced image and said unenhanced image on a single print in a side by side relationship.

3. (Original) A method according to claim 1, wherein said printing step comprises:

printing said enhanced image on an index print and printing said unenhanced image on a standard print.

4. (Original) A method according to claim 1, wherein said selecting step comprises:

selecting at least one image from said plurality of images where a flesh tone is detected.

5. (Original) A method according to claim 1, wherein said selecting step comprises:

selecting at least one image from said plurality of images where red-eye is detected in the image.

6. (Original) A method according to claim 1, wherein said selecting step comprises:

selecting said at least one image for enhancement based on characteristics of said at least one image which includes at least one of red-eye, tone scale, under exposure compensation, noise reduction and sharpness.

- 7. (Original) A method according to claim 6, wherein each of said characteristics is assigned a predetermined weighting factor and the selected image for enhancement has a total weighting factor which is above a threshold value.
- 8. (Original) A method according to claim 6, wherein each of said characteristics is assigned a value and said value is used to generate a message or information for a consumer.
- 9. (Original) A method according to claim 1, wherein said unenhanced image is a digitally rendered image to simulate an optical image and said digitally enhanced image is digitally rendered with superior quality to said unenhanced image.
- 10. (Original) A method according to claim 1, wherein said printing step comprises:

printing the unenhanced image on a first index print and printing the enhanced image on a second index print.

11. (Original) A method according to claim 1, wherein said selecting step comprises:

selecting at least one image from said plurality of images where a face is detected.

12. (Currently Amended) A method according to claim 1, wherein said selecting step comprises:

disqualifying any images from said plurality of images where the image has inappropriate content, high grain, a poorly composed image content, out of focus images, or other objectionable image artifacts.

- 13. (Original) A method according to claim 1, wherein said unenhanced image is an optically generated print.
- 14. (Original) A method according to claim 1, wherein said enhanced image is printed on a first print which is printed inline with a second print having said unenhanced image.
- 15. (Original) A method according to claim 1, wherein said enhanced image is printed on a first print by a first printer and said unenhanced image is printed on a second print by a second printer
- 16. (Original) An imaging system comprising:
 an image data manager adapted to receive image data
 representative of a customer image order and select at least one image from said
 customer order for rendering as an unenhanced image and as a digitally enhanced
 image.
- 17. (Original) An imaging system according to claim 16, further comprising:

a printer for printing said unenhanced image and said digitally enhanced image on a single print in an adjacent manner.

- 18. (Original) An imaging system according to claim 16, further comprising:
- a printer for printing said unenhanced image on an index print and said digitally enhanced image on a standard print.
- 19. (Original) An imaging system according to claim 16, further comprising:

a printer for printing said unenhanced image on a first print and said digitally enhanced image on a second print.

- 20. (Original) An imaging system according to claim 16, wherein said image data manager is operationally communicated with an internet connection to transfer said unenhanced image and said digitally enhanced image to a remote personal computer for display on the computer.
- 21. (Original) An imaging system according to claim 16, wherein said image data manager is operationally communicated with a kiosk connector to transfer said unenhanced image and said digitally enhanced image to a remote kiosk computer for display on the kiosk.
- 22. (Original) An imaging system according to claim 16, wherein said unenhanced image is printed on a first print by a first printer and said enhanced image is printed on a second print by a second printer.
- 23. (Original) A method of offering imaging services comprising the steps of:

selecting at least one image from a customer order for rendering as an unenhanced image and as a digitally enhanced image;

applying enhancement algorithms to said selected image to create the digitally enhanced image; and

displaying said unenhanced image and said enhanced image on an electronic display.

24. (Original) A method according to claim 23, further comprising:

providing said unenhanced image and said digitally enhanced image on a CD.

25. (Original) A method according to claim 23, wherein said displaying step comprises displaying said unenhanced image and said enhanced image in a side by side manner on the display.

26. (Original) A method according to claim 23, wherein said displaying step comprises:

sending the unenhanced image and the enhanced image to a remote computer for display on the remote computer.

27. (Original) A method according to claim 23, comprising the step of:

assigning a value representative of an amount of enhancement to said selected image.

28. (Original) A method according to claim 27, comprising the further step of:

sending information to a remote computer which includes said value.

29. (Original) A method according to claim 27, comprising the further step of:

using said value to generate messages for transfer to a consumer.

30. (Currently Amended) A method of creating a comparison print comprising the steps of:

placing an unenhanced image on a first portion of a comparison print; and

placing a digitally enhanced rendering of the same image on a second portion of the comparison print, wherein the digitally enhanced rendering is adjusted for red-eye, flesh tone, under exposure compensation, or noise reduction and sharpness as compared to the unenhanced image.

31. (Original) A method according to claim 30, wherein said second portion of said comparison print is adjacent to said first portion, to permit a viewer to view and compare the unenhanced image on the first portion of the print and digitally enhanced rendering of the image on the second portion of the print.

- 32. (Original) A comparison print comprising:
- a first portion having an image thereon; and
- a second portion having a digitally enhanced rendering of the same image thereon, wherein the digitally enhanced rendering is adjusted for red-eye, flesh tone, under exposure compensation, or noise reduction and sharpness as compared to the unenhanced image.
- 33. (Original) A comparison print according to claim 32, further comprising a third portion having an informational message pertinent to at least the digitally enhanced image thereon.
- 34. (Original) A method of printing a customer image order, the method comprising the steps of:

obtaining a digital record of a customer order containing a plurality of images;

selecting at least one image from said plurality of images for printing as an unenhanced image and as a digitally enhanced image; and printing said digitally enhanced image and said unenhanced image.
